

Advanced Product Management & Bulk Editor Dashboard

Changes for the "Products Option in the left sidebar of the Dashboard

Complete UI/UX & Feature Specification

1. Product Management Dashboard — Overview

Design a clean, modern, professional Shopify-style **Product Management Dashboard** where all store products are displayed in a powerful data table.

The dashboard should allow merchants to:

- View all products
- Search products
- Filter products
- Sort products
- Select individual or multiple products
- Bulk edit product information
- Bulk update prices
- Bulk update compare-at prices
- Bulk manage tags
- Bulk update product status
- Apply percentage-based price changes
- Apply fixed-amount price changes
- Apply rule-based pricing
- Preview changes before applying
- Undo/revert bulk changes
- Manage product information efficiently

The interface must be **clean, scalable, fast, and easy to navigate**, even when the store contains thousands of products.

2. Main Navigation / Tabs

At the top of the Product Management page, create status tabs:

Product Status Tabs

- All Products
- Active
- Draft
- Archived
- Inactive

Each tab should display the product count.

Example:

All Products (1,250)

Active (980)

Draft (120)

Archived (150)

The selected tab should have a clear active state.

3. Product Search

Provide a prominent global product search field.

Search should support:

- Product title
- Product ID
- SKU
- Variant SKU
- Vendor
- Product type
- Tags
- Barcode

- Handle
- Collection
- Variant title

Example:

Search:

New Seller

The table should instantly show products matching the search query.

Support:

- Instant search
 - Search suggestions
 - Clear search button
 - Recent searches
 - Search across all product fields
 - Exact-match and partial-match searching
-

4. Advanced Filter System

Create an advanced filter button.

When clicked, open a filter panel/drawer.

Shopify-style filters

Include:

Product Information

- Product title
- Product type
- Vendor
- Product status
- Product ID
- Handle
- Collection
- Sales channel

Inventory

- Inventory quantity
- Inventory status
- In stock
- Out of stock
- Low stock
- Inventory tracking enabled/disabled

Pricing

- Price
- Compare-at price
- Cost per item
- Price range
- Compare-at price range
- Products with/without compare-at price

Product Attributes

- Tags
- Product type
- Vendor
- Collections
- Options
- Variants
- SKU
- Barcode

Date Filters

- Created date
- Updated date

Support:

- Today
- Yesterday
- Last 7 days
- Last 30 days
- Last 90 days
- Custom date range

Variant Filters

- Variant count

- Variant title
 - Variant SKU
 - Variant price
 - Variant inventory
 - Variant availability
-

5. Smart Tag Filtering

Tags should have powerful filtering capabilities.

Example:

Filter:

Tag → contains → New Seller

Then show only products containing the New Seller tag.

Support conditions:

- Contains
- Does not contain
- Is
- Is not
- Starts with
- Ends with

Allow multiple tag conditions.

Example:

Tag contains "New Seller"

AND

Tag contains "Summer"

OR

Tag contains "New Seller"

OR

Tag contains "Featured"

6. Multiple Filter Conditions

The filtering system should support:

AND / OR logic

Example:

Products where:

Tag = New Seller

AND

Vendor = Nike

AND

Price > \$50

Or:

Tag = New Seller

OR

Tag = Featured

Allow users to add/remove filter conditions dynamically.

Provide:

Save Filter

Users can save frequently used filters.

Example:

- New Seller Products
- Products Under \$50
- Low Stock Products
- Recently Updated
- Sale Products

7. Product Table

The main content area should contain a highly customizable product data table.

Recommended columns:

1. Checkbox
2. Product Image
3. Product Title
4. Status
5. Vendor
6. Product Type
7. Tags
8. Variants
9. Price
10. Compare-at Price
11. Cost
12. Inventory
13. SKU
14. Collections
15. Created Date
16. Updated Date
17. Sales
18. Actions

The user should be able to customize which columns are visible.

Column controls

Allow:

- Show/hide columns
 - Reorder columns
 - Resize columns
 - Save column preferences
-

8. Product Row Interaction

Each product row should provide quick actions.

Example:

Product → **More**

Actions:

- Edit Product
- Edit Price
- Edit Variants
- Edit Tags
- Edit Inventory
- Duplicate
- Archive
- Activate
- Delete
- View Product
- View in Shopify
- View Product History

Clicking the product title should open a detailed product editor.

9. Product Selection

Every row should have a checkbox.

Support:

- Select one product
- Select multiple products
- Select all visible products
- Select all filtered products
- Select all products

Example:

There are 500 products matching a filter.

User selects:

Select all 500 matching products

This is important for bulk operations.

10. Bulk Action Toolbar

Once products are selected, show a sticky bulk action toolbar.

Example:

25 Products Selected

Actions:

- Bulk Edit
- Change Price
- Change Compare-at Price
- Add Tags
- Remove Tags
- Replace Tags
- Change Vendor
- Change Product Type
- Change Status
- Add to Collection
- Remove from Collection
- Update Inventory
- Edit SEO
- Archive
- Activate
- Delete

Also include:

More Actions

11. Advanced Bulk Editor

Clicking **Bulk Edit** should open a spreadsheet-style bulk editor.

The interface should feel similar to:

- Shopify bulk editor
- Google Sheets
- Excel

Each product should be a row and each editable field should be a column.

Editable fields:

Basic Information

- Product Title
- Description
- Product Type
- Vendor
- Tags
- Handle

Pricing

- Price
- Compare-at Price
- Cost per Item

Inventory

- SKU
- Barcode
- Inventory Quantity
- Inventory Policy
- Track Inventory

Product Status

- Active
- Draft
- Archived

Shipping

- Weight
- Weight Unit
- Requires Shipping

SEO

- SEO Title
- SEO Description
- URL Handle

Organization

- Collections
- Product Type
- Vendor

- Tags
-

12. Spreadsheet Editing Features

The bulk editor should support:

- Inline editing
- Copy/paste
- Multi-cell selection
- Fill down
- Fill up
- Duplicate value
- Undo
- Redo
- Keyboard navigation
- Keyboard shortcuts
- Validation
- Unsaved changes indicator

Example:

User changes price:

\$50 → \$45

Then the cell should immediately show the modified state.

13. Advanced Bulk Price Editor

Create a dedicated **Bulk Pricing** tool.

The user should be able to modify prices for selected products.

Pricing Operations

Increase by Percentage

Example:

+20%

\$100 → \$120

Decrease by Percentage

Example:

-20%

\$100 → \$80

Increase by Fixed Amount

Example:

+\$10

\$100 → \$110

Decrease by Fixed Amount

Example:

-\$10

\$100 → \$90

Set Fixed Price

Example:

Set price = \$49

14. Compare-at Price Bulk Editor

Allow the same operations for Compare-at Price.

Options:

- Increase %
- Decrease %
- Increase fixed amount

- Decrease fixed amount
- Set fixed value
- Clear compare-at price

Example:

Price:

\$80

Compare-at:

\$100

Apply:

Price -20%

Result:

\$64

Compare-at:

\$100

15. Price Rounding Rules

Provide optional rounding rules.

Examples:

- Round to nearest whole number
- Round up
- Round down
- Round to nearest .99
- Round to nearest .95
- Round to nearest .49

Example:

\$83.27 → \$83.99

16. Rule-Based Pricing Engine

This should be one of the core features.

Create a **Pricing Rules** system where merchants can create reusable pricing rules.

Rule structure:

IF

conditions

THEN

action

Example:

IF:

Tag contains "New Seller"

THEN:

Decrease Price by 20%

17. Pricing Rule Examples

Example 1 — New Seller

IF:

Tag = New Seller

THEN:

Price → -20%

Example 2 — Premium Products

IF:

Tag = Premium

THEN:

Price → +15%

Example 3 — Vendor Pricing

IF:

Vendor = Nike

THEN:

Price → +10%

Example 4 — Product Type

IF:

Product Type = T-Shirt

THEN:

Price → -\$5

Example 5 — Price Range

IF:

Price > \$100

THEN:

Price → -10%

Example 6 — Multiple Conditions

IF:

Tag = New Seller

AND

Vendor = ABC

AND

Price > \$50

THEN:

Price → -20%

18. Rule Conditions

Support conditions for:

- Product Title
- Vendor
- Product Type
- Tags
- Collections
- Price
- Compare-at Price
- Cost
- SKU
- Inventory
- Created Date
- Updated Date
- Product Status
- Variant Count

Operators:

- Is

- Is not
 - Contains
 - Does not contain
 - Starts with
 - Ends with
 - Greater than
 - Less than
 - Greater than or equal
 - Less than or equal
 - Between
-

19. Rule Actions

Rules should be able to:

Price

- Increase %
- Decrease %
- Increase fixed amount
- Decrease fixed amount
- Set fixed price

Compare-at Price

- Increase %
- Decrease %
- Increase fixed amount
- Decrease fixed amount
- Set fixed price
- Clear value

Product Data

- Add tag
- Remove tag
- Replace tag
- Change vendor
- Change product type
- Change status
- Add collection

- Remove collection
-

20. Bulk Tag Management

Provide a dedicated Tag Manager.

Actions:

Add Tags

Example:

Selected 100 products

Add:

Summer Sale

Remove Tags

Remove:

Old Collection

Replace Tags

Replace:

New Seller

with:

Featured Seller

Tag Conditions

Allow bulk tag operations based on filters.

21. Bulk Product Status Management

Allow users to change:

- Active → Draft
- Draft → Active
- Active → Archived
- Draft → Archived

Provide confirmation before destructive actions.

22. Bulk Collection Management

Allow:

- Add products to collection
- Remove products from collection
- Replace collection
- Add multiple collections

Example:

Select 200 products → Add to:

Summer Collection

23. Bulk Variant Management

The system should support bulk editing at variant level.

Editable fields:

- Variant title
- SKU
- Barcode
- Price
- Compare-at price
- Cost

- Inventory
- Weight
- Option values
- Availability

Provide:

Product View / Variant View

24. Bulk Inventory Editing

Allow:

- Set inventory
- Increase inventory
- Decrease inventory
- Set inventory policy
- Enable/disable inventory tracking

Example:

Selected products:

Inventory +50

25. Product Import / Export

Include:

Export

- All products
- Selected products
- Filtered products

Export formats:

- CSV
- Excel

Import

Allow CSV-based product updates.

Provide:

- Upload CSV
 - Map columns
 - Preview changes
 - Validate data
 - Apply updates
-

26. Preview Before Applying Changes

This is extremely important.

Before applying any bulk change, show a confirmation/preview screen.

Example:

Bulk Price Update

Selected Products: 20

Rule:

Decrease price by 20%

Preview

Product	Current Price	New Price
Product A	\$100	\$80
Product B	\$50	\$40
Product C	\$75	\$60

Show:

- Number of affected products
- Number of affected variants

- Current values
- New values
- Products that will not change
- Validation warnings

Buttons:

Cancel

Apply Changes

27. Change History / Audit Log

Every bulk operation should be recorded.

Example:

August 17, 2026

User:

Admin

Action:

Price decreased by 20%

Filter:

Tag contains New Seller

Affected:

20 products

Status:

Completed

Provide:

- View changes
- Restore changes

- Download log
-

28. Undo / Rollback

Allow users to undo recent bulk operations.

Example:

20 products were updated

Undo

Clicking Undo should restore the previous values.

For safety, maintain a version/change history.

29. Saved Views

Users should be able to save custom product views.

Example:

Saved Views

- All Products
- New Seller Products
- Sale Products
- Low Stock
- Products Without Images
- Products Without Compare Price
- Recently Updated
- Recently Created
- High Value Products

Each saved view should remember:

- Filters
- Sorting
- Columns

- Search
 - Status tab
-

30. Sorting

Allow sorting by:

- Product Name
- Price
- Compare-at Price
- Inventory
- Vendor
- Product Type
- Created Date
- Updated Date
- SKU
- Sales
- Number of Variants

Support:

- Ascending
- Descending

Example:

Price ↓

Highest price first.

31. Product Information Drawer

Clicking a product should optionally open a right-side drawer.

Display:

Product Overview

- Image

- Title
- Status
- Vendor
- Product Type
- Tags
- Collections

Pricing

- Price
- Compare-at Price
- Cost
- Margin

Inventory

- Total inventory
- Variant inventory

Metadata

- Created
- Updated
- Product ID
- Handle

Provide:

Edit Product

button.

32. Dashboard Statistics

At the top of the page, optionally display summary cards.

Cards:

Total Products

1,250

Active

980

Draft

120

Archived

150

Low Stock

42

Out of Stock

25

Products on Sale

310

These cards should be clickable and apply the corresponding filter.

33. Smart Bulk Selection

When a filter is applied:

Example:

Tag contains New Seller

Result:

20 products

Show:

20 products found

Checkbox:

Select all 20 products

Then allow:

Bulk Edit

This should make workflows such as the following extremely easy:

1. Filter → Tag contains "New Seller"
 2. 20 products found
 3. Select all
 4. Bulk Pricing
 5. Decrease Price
 6. 20%
 7. Preview
 8. Apply
-

34. Pricing Automation

Create a separate **Pricing Rules** page in the app.

Navigation:

- Products
- Bulk Editor
- Pricing Rules
- Saved Views
- History
- Settings

Users can create reusable rules.

Example:

Rule Name

New Seller 20% Discount

Conditions

Tag contains New Seller

Action

Price → Decrease by 20%

Optional Compare-at Price

Compare-at Price → Keep unchanged

Status

Active / Inactive

35. Rule Scheduling

Advanced pricing rules can optionally support scheduling.

Example:

Rule:

Summer Sale -20%

Schedule:

August 20 → September 10

At the start date:

Automatically apply rule.

At the end date:

Optionally restore previous prices.

Provide:

- Start date
- End date
- Start time
- End time
- Time zone
- Automatic rollback

36. Product Data Validation

Before saving changes, validate:

- Invalid prices
- Negative prices
- Invalid SKU
- Duplicate SKU
- Invalid inventory
- Missing required values
- Invalid compare-at price
- Invalid tags

Show clear inline errors.

37. Performance & Large Catalog Support

The interface must be designed for stores containing:

- 100 products
- 1,000 products
- 10,000+ products

Use:

- Pagination
- Virtualized table
- Lazy loading
- Server-side filtering
- Server-side sorting
- Debounced search
- Background bulk processing

Never load thousands of products into the browser unnecessarily.

38. Bulk Operation Progress

For large operations, show progress.

Example:

Updating Products

1,245 / 2,000

Progress bar:

62%

Status:

- Processing
- Completed
- Failed
- Skipped

At completion:

1,980 products updated successfully

20 products failed

Provide:

[View Errors](#)

39. Error Handling

If some products cannot be updated:

Show:

Bulk Update Completed

Success:

980 products

Failed:

20 products

Skipped:

5 products

Provide:

Download Error Report

40. Permissions & Security

Support user roles and permissions.

Example permissions:

- View Products
- Edit Products
- Bulk Edit
- Change Prices
- Manage Tags
- Manage Inventory
- Manage Pricing Rules
- Delete Products
- Export Products

Price-changing operations should optionally require additional confirmation.

41. Responsive UI

The desktop experience should be optimized for large data tables.

For smaller screens:

- Horizontal table scrolling

- Sticky product column
 - Sticky bulk toolbar
 - Responsive filters
 - Drawer-based editing
 - Mobile-friendly product details
-

42. UI/UX Design Requirements

The interface should be:

- Clean
- Minimal
- Professional
- Shopify Admin-inspired
- Easy to scan
- Low visual clutter
- Highly organized
- Consistent
- Fast
- Accessible

Avoid displaying too many controls at once.

Use:

- Tabs
 - Filter drawer
 - Bulk action toolbar
 - Dropdown menus
 - Modal dialogs
 - Side drawers
 - Tooltips
 - Confirmation dialogs
 - Sticky headers
-

43. Recommended Main Layout

Header

Products

Search products...

Filter

Sort

Columns

Saved Views

Export

Status Tabs

All | Active | Draft | Archived

Filter Bar

Example:

Tag: New Seller ×

Vendor: ABC ×

Price: > \$50 ×

Clear all

Product Table

✓	Product	Status	Vendor	Type	Tags	Price	Compare	Inventory	Created	Updated
✓	Premium T-Shirt	Active	ABC	Apparel	New Seller	\$40	\$50	120	Aug 10	Aug 17

✓	Classic Hoodie	Active	XYZ	Apparel	Featured	\$60	\$75	80	Aug 8	Aug 16
---	----------------	--------	-----	---------	----------	------	------	----	-------	--------

Bulk Toolbar

When selected:

20 Products Selected

Bulk Edit

Pricing

Tags

Collections

Inventory

Status

More

44. Example Complete Workflow

Use Case: Give 20% discount to New Seller products

Merchant opens:

Products

Step 1:

Click **Filter**

Step 2:

Select:

Tags → Contains → New Seller

Step 3:

System displays:

20 Products

Step 4:

Click:

Select All

Step 5:

Click:

Pricing

Step 6:

Select:

Decrease Price

Step 7:

Enter:

20%

Step 8:

Optional:

Apply to Compare-at Price

Step 9:

Click:

Preview Changes

Step 10:

System shows:

20 products will be updated

Step 11:

Review:

\$100 → \$80

\$50 → \$40

\$75 → \$60

Step 12:

Click:

Apply Changes

Step 13:

Show:

20 products successfully updated

Step 14:

Create history entry:

New Seller Price Adjustment -20%

45. Advanced Rule Example

Rule Name

New Seller Discount

IF

Tag contains:

New Seller

AND

Product status is:

Active

AND

Price is greater than:

\$20

THEN

Price:

Decrease by 20%

AND

Compare-at Price:

Keep unchanged

Rounding:

Nearest .99

Schedule:

August 20 – September 20

Status:

Active

46. Recommended App Navigation

Use a simple left sidebar:

Product Management

- Products

- Bulk Editor
- Pricing Rules
- Saved Views
- Import / Export
- Change History

Settings

- General
 - Permissions
 - Automation
 - Pricing Settings
-

47. Most Important Features — Priority

Must Have

1. Product table
2. Search
3. Status tabs
4. Advanced filters
5. Sorting
6. Column customization
7. Product selection
8. Bulk editor
9. Bulk price editing
10. Percentage price changes
11. Fixed amount price changes
12. Compare-at price editing
13. Bulk tag management
14. Bulk status management
15. Bulk collection management
16. Preview before applying
17. Change history
18. Undo/rollback
19. Saved filters/views
20. Product details

Advanced Features

21. Rule-based pricing

- 22. AND/OR conditions
- 23. Scheduled pricing
- 24. Automatic rollback
- 25. Bulk inventory editing
- 26. Variant-level editing
- 27. CSV import/export
- 28. Error reports
- 29. Progress tracking
- 30. Role-based permissions

Future / Pro Features

- 31. Automatic pricing automation
 - 32. Margin-based pricing
 - 33. Cost-based pricing
 - 34. Competitor pricing rules
 - 35. AI-assisted bulk editing
 - 36. Smart product segmentation
 - 37. Automated sale campaigns
 - 38. Price history charts
 - 39. Advanced analytics
 - 40. Automated product cleanup
-

48. Final Design Goal

The final product management system should feel like a combination of:

Shopify Product Admin + Advanced Bulk Editor + Excel-style Editor + Pricing Automation Engine

The most important UX principle is:

A merchant should be able to find any group of products in a few clicks, select them, modify any product information in bulk, preview the changes, and safely apply or undo those changes.

The interface must make complex operations simple.

Example target workflow:

Search / Filter → Select Products → Choose Bulk Action → Configure Changes → Preview → Apply → History / Undo

This workflow should be the foundation of the entire Product Management experience.

এটার মধ্যে সবচেয়ে important অংশ হলো **Filter** → **Select** → **Bulk Edit** → **Preview** → **Apply** → **Undo** workflow। এতে তোমার app শুধু Shopify-এর product table copy করবে না; বরং **bulk pricing + product management automation tool** হিসেবে অনেক বেশি powerful হবে।

er sathe store owner kono particular product e ki ki customization website er customer k allow korbe korar jonno ekta action button thakbe , oi button theke every particular product er customization korte parbe, eta o add koro,

হ্যাঁ। এই feature-টা **Product Management**-এর **core feature** হিসেবে রাখা উচিত। অর্থাৎ প্রতিটি product-এর জন্য store owner আলাদাভাবে নির্ধারণ করতে পারবে—customer ওই product-এ কী কী **customization** করতে পারবে, কোন **option** দেখাবে, কোনটা **required/optional** হবে, **pricing** কীভাবে কাজ করবে ইত্যাদি।

নিচের section-টা আগের documentation-এর সাথে add করতে পারো:

49. Product Customization Management

Add a dedicated “**Customize**” / “**Customization**” action for every individual product in the product management table.

This action allows the store owner to configure exactly what customers can customize on that particular product from the storefront.

The customization settings must be **product-specific**, meaning each product can have completely different customization options, pricing rules, and customer input fields.

50. Product-Level Customization Action

Every product row should have an action:

Customize

Example:

Product	Status	Price	Tags	Actions
Custom T-Shirt	Active	\$25	Apparel	Customize · Edit · More

Business Card Active \$15 Printing Customize · Edit · More

Banner Active \$40 Signs Customize · Edit · More

Clicking **Customize** opens the product-specific customization editor.

51. Customization Editor

The customization editor should have a dedicated workspace for configuring the customer-facing product options.

Header:

Customize: Custom T-Shirt

Show:

- Product image
- Product title
- Product status
- Vendor
- Product type
- Number of customization options
- Last updated

Actions:

Preview Storefront

Save

Save & Publish

52. Customization Categories

Allow the store owner to add different types of customization options.

Text

- Custom Text
- Name
- Initials
- Number
- Message
- Custom Instructions

Settings:

- Label
 - Placeholder
 - Required/Optional
 - Character limit
 - Minimum characters
 - Maximum characters
 - Default value
 - Help text
-

53. Image Upload

Allow customers to upload their own artwork/design.

Settings:

- Enable/Disable image upload
- Field label
- Required/Optional
- Maximum file size
- Allowed file types
- Maximum number of files
- Minimum image resolution
- Maximum image resolution
- Upload instructions

Supported formats:

- JPG
- JPEG
- PNG
- SVG
- PDF
- WEBP

54. Design Upload / Artwork Upload

For printing products, provide a dedicated artwork upload option.

Example:

Upload Your Design

Drag & Drop your artwork here

Browse Files

Show:

- File name
- File size
- Preview
- Remove
- Replace

Optional validation:

Minimum resolution: 150 DPI

Recommended resolution: 300 DPI

55. Dropdown Customization

Allow the merchant to create dropdown options.

Example:

Paper Type

- Matte
- Glossy
- Premium
- Recycled

Settings:

- Option name
 - Option value
 - Default option
 - Required/Optional
 - Additional price
-

56. Radio / Button Options

Allow button-style choices.

Example:

Print Side

Single Side

Double Side

Each option can have its own price adjustment.

Example:

Single Side → \$0

Double Side → +\$5

57. Color Customization

Allow color swatches.

Example:

Print Color

- ☐ White
- ☒ Black

- Red
- Blue

Settings:

- Color name
 - Color value
 - Swatch image
 - Hex color
 - Additional price
 - Default selection
-

58. Size / Dimension Customization

Allow customers to enter custom dimensions.

Fields:

- Width
- Height
- Length
- Thickness
- Depth

Units:

- Inch
- Feet
- Meter
- Centimeter
- Millimeter

Example:

Width: 10 in

Height: 20 in

The merchant should be able to configure:

- Minimum value
- Maximum value
- Step value

- Decimal support
 - Unit
 - Required/Optional
-

59. Quantity Customization

Allow custom quantity selection.

Example:

Quantity

- 10
- 25
- 50
- 100
- 250
- 500

Or allow customers to enter a custom quantity.

Support:

- Minimum quantity
 - Maximum quantity
 - Quantity increment
 - Tier pricing
-

60. Material Selection

For printing products, allow customers to choose materials.

Example:

Material

- Vinyl
- Foam Board
- Acrylic

- Coroplast
- Canvas
- PVC

Each material can have:

- Additional price
 - Description
 - Image
 - Stock status
-

61. Finishing Options

Allow product-specific finishing options.

Example:

Business Card

- Rounded Corners
- Matte Finish
- Glossy Finish
- Spot UV
- Foil
- Embossing

Each option can have its own additional price.

62. Product-Specific Pricing

Every customization option should optionally affect product price.

Pricing methods:

Fixed Amount

+\$5

Percentage

+10%

Per Unit

+\$0.50 per piece

Per Area

+\$2 per sq. ft.

Per Dimension

Based on:

Width × Height

Tier Pricing

Example:

Quantity	Price
1–10	\$10
11–50	\$8
51–100	\$6
101+	\$5

63. Conditional Customization

Allow one customization option to depend on another option.

Example:

IF:

Print Side = Double Side

THEN SHOW:

Back Design Upload

OR:

IF:

Material = Acrylic

THEN SHOW:

Thickness

OR:

IF:

Finishing = Rounded Corner

THEN SHOW:

Corner Radius

This allows complex product configurators to be built without creating separate Shopify products.

64. Required / Optional Fields

Every customization option should have:

Required

or

Optional

Example:

Logo Upload:

Required ✓

Special Instructions:

Optional

If a required field is empty, the customer cannot add the product to cart.

65. Customization Option Ordering

Allow drag-and-drop ordering.

Example:

1. Choose Size
2. Choose Material
3. Choose Print Type
4. Upload Design
5. Finishing
6. Special Instructions

The storefront should display options in the same order.

66. Enable / Disable Customization

Every product should have a master switch:

Enable Product Customization

ON / OFF

If OFF:

The product behaves like a normal Shopify product.

If ON:

The configured customization options appear on the storefront.

67. Customization Templates

To avoid configuring every product manually, provide reusable templates.

Example templates:

- T-Shirt Customization
- Business Card Customization
- Banner Customization
- Sticker Customization
- Mug Customization
- Sign Customization
- Poster Customization
- Apparel Customization

The store owner can:

Create Template

Then:

Apply Template to Products

68. Apply Customization Template to Multiple Products

Allow bulk assignment of customization configurations.

Example:

Select:

20 T-Shirts

Action:

Customization → Apply Template

Select:

Apparel Customization Template

Apply.

This should configure all selected products at once.

69. Copy Customization From Another Product

Inside the customization editor provide:

Copy From Product

Example:

Current product:

Premium T-Shirt

Copy customization from:

Classic T-Shirt

Options:

- Copy all customization settings
 - Copy selected options only
 - Copy pricing rules
 - Copy conditional logic
-

70. Customization Preview

Provide a storefront preview.

Button:

Preview Customizer

The preview should show exactly how the customer will see the customization interface.

Preview should include:

- Product image
 - Variant selector
 - Customization fields
 - Upload fields
 - Price changes
 - Dynamic total
 - Add to Cart button
-

71. Live Price Preview

As customers select customization options, the product price should update dynamically.

Example:

Base Price:

\$25

Size:

+\$5

Double Side:

+\$3

Premium Material:

+\$7

Final Price:

\$40

72. Product Customization Canvas

For advanced products, optionally provide a live design canvas.

Customer can:

- Upload image
- Add text
- Move elements
- Resize elements
- Rotate elements
- Change text color
- Choose font
- Position artwork

The store owner should be able to enable/disable the canvas per product.

73. Customization Data in Cart

All customer selections should be stored with the cart item.

Example:

Product: Custom T-Shirt

Size: Large

Color: Black

Print Location: Front

Custom Text: JOHN

Uploaded Artwork: logo.png

Finish: Matte

Quantity: 50

This information should remain associated with the cart item and order.

74. Customization Data in Order

After checkout, the store owner should be able to see all customization information inside the order.

Display:

Customer Customization

- Selected options
- Custom text
- Uploaded files
- Dimensions
- Quantity
- Materials
- Finishing
- Additional charges
- Final customization price

Provide:

Download Artwork

and

View Customization

75. Product Table Customization Indicator

Add a customization column to the product table.

Example:

Product	Customization	Actions
T-Shirt	✓ Enabled · 6 Options	Customize
Mug	✓ Enabled · 4 Options	Customize
Poster	— Disabled	Customize

This allows the merchant to quickly identify which products have customization enabled.

76. Quick Customization Status

Inside the product row, show:

Customization Enabled

or

Customization Disabled

Also show:

6 Options

Example:

✓ Enabled · 6 options

Clicking it should open the customization editor.

77. Customization Bulk Actions

From the product table, selected products should support:

- Enable Customization
- Disable Customization
- Apply Customization Template
- Copy Customization
- Remove Customization
- Change Customization Template

Example:

Select:

20 T-Shirts

Bulk Action:

Customization → Apply Apparel Template

78. Customization Analytics

Optional advanced feature.

Track:

- Products with customization
- Customization usage
- Most-used options
- Most-selected materials
- Most-selected sizes
- Most-uploaded products
- Average customization price
- Customization conversion rate

Example:

Top Customization

Double-Sided Print – 68% selection rate

79. Recommended Product Action Menu

Each product should have a clean action menu:

Customize

Edit Product

Bulk Edit

View Product

View Variants

Duplicate

Archive

More

The **Customize** action should be visually prominent because it is a core feature.

80. Recommended Product Management Workflow

The complete workflow should be:

Product Management

Products → Search / Filter → Select Product → Customize

Then:

Customization Settings → Add Options → Configure Pricing → Configure Conditions → Preview → Save

For multiple products:

Filter → Select Products → Bulk Action → Apply Customization Template → Preview → Apply

81. Final Product Management Architecture

The complete app should combine these major systems:

1. Product Management

- Product table
- Search
- Filters

- Sorting
- Status
- Columns

2. Bulk Editor

- Bulk product editing
- Bulk variant editing
- Bulk tags
- Bulk collections
- Bulk inventory
- Bulk status

3. Pricing Engine

- Percentage pricing
- Fixed pricing
- Compare-at pricing
- Pricing rules
- Conditional pricing
- Scheduled pricing

4. Product Customization

- Text
- Image upload
- Artwork upload
- Dropdown
- Buttons
- Color swatches
- Dimensions
- Quantity
- Materials
- Finishing
- Conditional fields
- Dynamic pricing

5. Customization Templates

- Create templates
- Apply templates
- Copy customization
- Bulk template assignment

6. Order Customization Data

- Store customer selections
- Store uploaded artwork
- Show customization in orders
- Download artwork

7. History & Safety

- Preview
 - Change history
 - Undo
 - Rollback
 - Error handling
-

Core UX Principle

The entire dashboard should make this workflow extremely simple:

Find Product → Customize Product → Configure Customer Options → Configure Pricing → Preview → Save

And for multiple products:

Filter Products → Select Products → Bulk Edit / Apply Customization → Preview → Apply

The store owner should never need to open each Shopify product manually just to configure customer customization options. Every product should have a dedicated **Customize** action, while groups of products should support **bulk customization templates**.

এভাবে **Product Management + Bulk Editing + Pricing Rules + Product Customizer**—চারটা feature একই dashboard-এর মধ্যে logically connected থাকবে। বিশেষ করে **Customize button + customization template + bulk apply** রাখলে ১০০/৫০০ product থাকলেও store owner-এর কাজ অনেক দ্রুত হবে।
